#### **DETAILED ACTION**

## **Priority**

1. Applicant is requested to update the status of the parent application listed in the specification.

## Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The claimed "set of time domain parameters", "baseband phase-amplitude response", and "frequency subband", lacks antecedent basis.

### Claim Objections

3. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Claim number 54 occurs twice. Misnumbered claims 54-60 been renumbered 55-61.

4. Claim 9 is objected to because of the following informalities:

Claim should recite "wherein the information communication signal ..."

Appropriate correction is required.

## Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

7. Claims 43-61 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claimed "imposing the information pattern as a set of time domain parameters...", "set of respective *baseband* phase-amplitude response...", and "frequency subband", in claims 43-61 fails to comply with the written description requirement. i.e. it is unclear how (b) imposing the information pattern as a set of time domain parameters on a signal, having at least as many time domain parameters as

degrees of freedom, to produce an information communication signal; and (e) how the set of time domain parameters from a set of respective baseband phase-amplitude responses is determined.

8. Claims 54 and 56-58 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 54 recites "the demodulator homodyne" in page 17. There is insufficient antecedent basis for this limitation in the claim.

Claims 56-58 recite "the phase amplitude response". It is unclear whether this response is a set of responses or a single response. There is insufficient antecedent basis for this limitation in the claims.

#### Examiner Contact Information

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William Bangachon whose telephone number is (571)-272-3065. The examiner can normally be reached on 4/4/10.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Horabik can be reached on (571)-272-3068. The fax phone numbers for the organization where this application or proceeding is assigned is 703-872-9314 for regular and After Final formal communications. The examiner's fax number is (571)-273-3065 for informal communications.
